Assignment Two - A Doctor’s Visit - 20 points

Name _________________________

Think about going to the doctor’s office for a physical. Name 10 observations a doctor will make about you and the instruments the doctor is using to make those observations. For example, usually the first thing that happens is that your weight is taken by a scale. Your weight is a data point. You may use this if you want. Think of 9 other things that a doctor might do to take data on you. This is due on our second class meeting.

Observation       Instrument used
